

Green Policy

Vision

In the 21st Century, global warming has been elevated to the forefront of environmental control focus and has consequently raised concerns worldwide. As an international company, Tecomet recognizes its environmental impact and associated responsibilities; therefore, the company proactively strives to achieve sustainable developments in all the phases of the organization's business services.

Green Policy

In the office or on the manufacturing floor, the Tecomet teams continue to work towards enhancing the health related aspects of the work environment with simple guidelines, such as reducing the amounts of energy usage and waste generation. Likewise, the team has identified opportunities for reusing supplies whenever practical and recycling materials that cannot be reused.

Green Office initiatives encompass the following specific action plans:

- The use of recycle bins in all work areas (paper, plastic, etc.)
- Send messages/documents by e-mail whenever possible
- Reduce printing by doing so only when it is necessary (whenever appropriate use both sides of the paper)
- Recycle toner cartridges
- Reuse office supplies (binders, paperclips, etc.)
- Turn off computers/machines over night and on weekends
- Turn off lights and air conditioning over night and on weekends

Green Manufacturing initiatives consider a full spectrum of measures that can reduce the amount of energy and waste associated with Tecomet production processes:

- Recycle metal waste
- Turn off machines over night and on weekends/holidays
- Keep industrial chemical use to a minimum and then disposing of these chemicals in an environmentally safe way
- Turn off lights for unmanned processes
- Turn off lights and air conditioning over night and on weekends

Green Shipping

As an international company, Tecomet ships goods around the world on a regular basis. The Tecomet, team realizes shipping by air, land, or water can create a significant amount of greenhouse gases. Therefore the team is focused on reducing the number of shipments by increasing the size of shipments whenever practical.
