The Patellar Preparation System accommodates all aspects of patellar replacement, regardless of technique or cementing process used. The single Patellar Reamer Clamp serves as patellar reamer and cement clamp promoting easy use.

The lightweight Patellar Reamer Clamp reduces the amount of time dedicated to patella preparation during a total knee replacement.

Single peg patella implant is completed in a one-step milling and drilling process. The drop-in drill guide accommodates a three peg patella implant.

The patella guides and graters are designed to accommodate customer specific sizes.

Patellar Reamer Clamp w/Driver Shaft Part #: 14-026-000
